National 89 On Line And Working Well!

The newly added Model 89 header is up to full speed now, giving us much needed capacity in the larger diameter and longer length parts. The machine adds to our existing heading capacity, increasing our capabilities in these larger sizes. These types of items continue to be a strength area for Safety Socket. While we find we are competitive on a large variety of cold headed fasteners, we are most competitive on the larger more challenging items.

Safety Socket Screw Corporation's recent addition to its manufacturing capabilities

If you have any items that have been a problem for you in the past—difficulty in getting them quoted, tight tolerances, quality problems etc.—send them to us.

We will quote them quickly and guarantee the quality.

Engineering Catalog On-Line Or On Disc

Safety Socket's engineering catalog, long used in the industry for a wealth of technical information on socket drive fasteners, is now available through our website. This site is very user friendly; just click on the screen menu item and describe the product you want to review. All information is in print format and can be printed or downloaded to you PC.
