

October 16th 2017

Safety Socket, LLC has been made aware of Kobe Steel statement that the company admitted to falsification of inspection certificates for a certain portion of its products including aluminum, copper products, and potentially, powdered steel. Safety Socket has reviewed all records subsequent to 1999 and has not purchased any raw material from Kobe Steel (including Kobe, Kobelco, Shinko, Toyotsu, Japan Aeroforge). There is no manufactured product supplied by Safety Socket that would have an impact due to this matter.

Thank you,

Safety Socket Management Team
