# Safety Socket

For over 80 years, Safety Socket has been the source for superior quality products, delivered on-time and at competitive prices. Major companies such as Lockheed Martin, General Dynamics, BAE Systems, Hamilton Sundstrand, Bombardier, Moog, Woodward Governor, Newport News and others specify Safety Socket products. These companies rely upon Safety Socket to provide the quality and performance which exceeds their requirements in mission-critical applications. Our customers know we will do what is necessary to meet their requirements and satisfy their production deadlines.

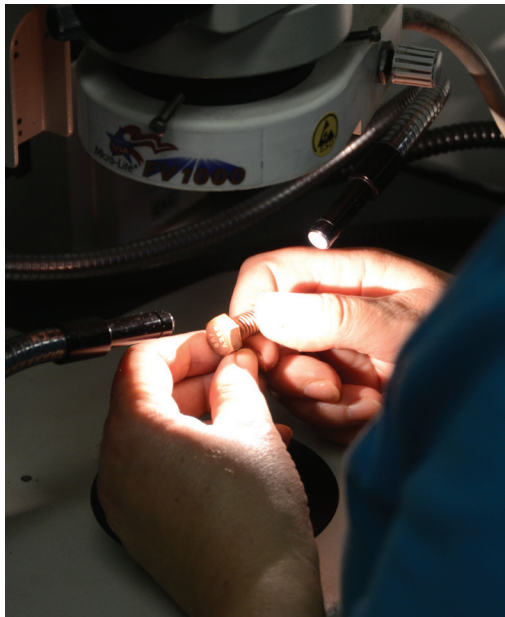

Depending upon size, material or part configuration, Safety Socket utilizes cold heading or screw machining to manufacture its products. Materials such as alloy steel, stainless steel and A286 are commonly used in our aerospace and military products.

In order to stay abreast of and help direct an ever-changing environment, Safety Socket sits on fastener committees of ASTM and ASME, and participates in a variety of industry trade associations and quality organizations. These include Industrial Fastener Institute (IFI), National Aerospace Standards Committee (NASC) of the Aerospace Industries Association, American Society of Mechanical Engineers (ASME).

From the moment we receive a request for quote to the time we make the shipment, your interests drive our performance. Without our customers, we are just another fastener manufacturer.

**Contact us today. We're ready to make  
a real difference in your next project.**
